

INDUSTRIAL EQUIPMENT MAINTENANCE & REPAIR EXPERTS

Repair, Remanufacture, and Modernization Solutions

At Enprotech, we offer a full range of services to keep your production in motion—including repairing, remanufacturing, and modernizing any and all large industrial equipment, components, and parts.

Our engineering and design team expertly analyzes, reverse engineers (when applicable), and optimizes even the most complex manufacturing and production equipment, restoring them to full functionality.

To ensure that your equipment is well-cared for from start to finish, we provide:

- The top engineering & design services in the nation
- Precision machining
- Certified welding
- Fabrication
- Professional disassembly/assembly teams

We're ready to be your turnkey partner in making your equipment more reliable, extending equipment lifecycles, and maximizing your productivity. **Let's get moving.**

REPAIR

Our world-class engineering and project management teams are committed to delivering the highest quality repairs (urgent and otherwise) that meet or exceed OEM specifications. With experience in managing the full lifecycle of some of the world's most complex machinery, our partnership ensures your equipment will stay in active production for a very long time.

REMANUFACTURE AND ENHANCEMENTS

In addition to our 70+ years of OEM experience, we have the technical knowledge and in-house capabilities to remanufacture damaged machinery, equipment, parts, and components back to a state that exceeds the industry's specifications.

Whether you need us for restoration, manufacturing new equipment, or managing the full lifecycle for maximized investment, we're confident we'll keep your production in motion—even in the highest-demanding environments.

MODERNIZATION AND EFFICIENCY SOLUTIONS

With our Engineered Modernization solutions, our engineering team can enhance some of the most complex machinery, equipment, and production challenges—taking your productivity to the next level.

Our Modernization and Efficiency solutions for machinery, components, and parts include:

- Reverse Engineering
- Engineer-to-Standards and Precision Tolerances
- Faro Arm 3D Scanning Capabilities

ON-SITE EQUIPMENT HEALTH ASSESSMENTS

Give us an opportunity to visit your site today. We'll come out and complete a full Equipment Health Assessment, inspecting your equipment and discovering opportunities to improve production while extending the life of your machinery. Our team will help advance your preventative maintenance efforts and avoid costly shutdowns.

INDUSTRIES WE SERVE

Rubber	Maritime	Mining	Agriculture
Building Products	Crane and Lifting	Recycling	Metal Forming Presses
Metal Productions: Steel, Aluminum, and other metals		Any and all other large industrial equipment
