

YOUR EXPERT PARTNER FOR METAL FORMING PRESS MAINTENANCE AND REPAIRS

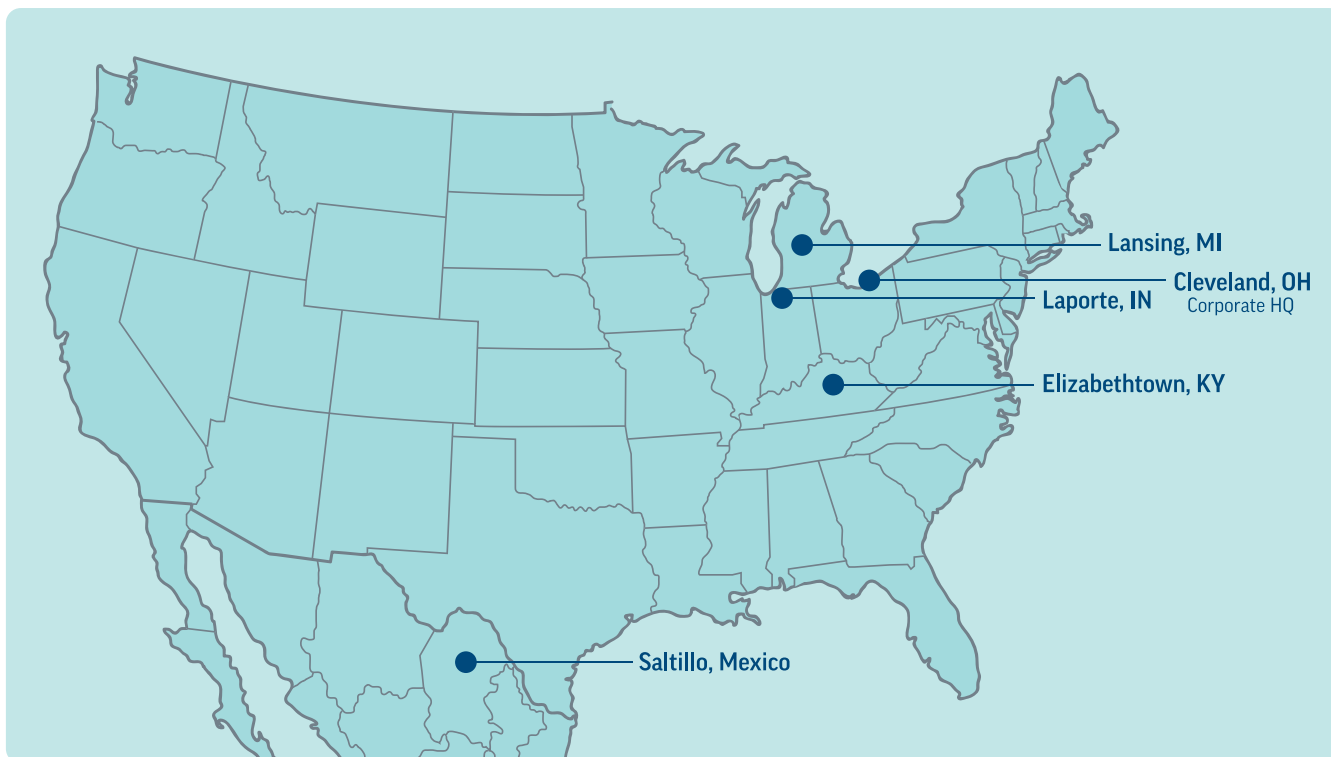

At Enprotech, we repair, remanufacture, and modernize any and all large industrial manufacturing presses. With more than 70 years of OEM experience, our engineering, field services, and design teams have the skills to repair specific parts or components—and even rebuild the entire press—extending the lifecycle and keeping your manufacturing in motion.

VERSON® AND DANLY OEM

As the exclusive OEM for Verson® and Danly parts, components, and engineering, our Advanced Engineering team works on-site with you to develop new opportunities to maximize your productivity. We start by analyzing your equipment, reverse engineering when needed, and providing the optimizations required to restore full functionality—with solutions that include control systems, automated die transfers, increasing stroke/minute productivity, and more.

Our five North American facilities feature the country's top precision machining, certified welding, and fabrication, as well as professional disassembly and assembly teams to ensure your equipment is cared for from start to finish.

We're ready to be your turn-key partner in managing all project details, minimizing equipment downtime, and keeping manufacturing lines in motion.

REPAIR

Our world-class engineering and project management teams will work with you to ensure your equipment, parts, or components are repaired to meet or exceed OEM specifications. We manage the full lifecycle for some of the world's most complex machinery—including mechanical, forging, hydraulic, Servo, and hydroforming presses. And our commitment to the highest quality standards ensures that all repairs are completed accurately and urgently.

Your Press Parts Supplier

With over 20,000 square feet of replacement part inventory, we're your quick-turnaround partner for parts—offering ready-to-ship clutches, brakes, gears, and more. Plus, we can engineer any new press part or component and reverse engineer parts when needed. Our inventory includes:

- Stocked OEM Verson® and Danly parts
- Stocked third-party consumable press parts
- LCM press parts
- North American NSD Sensor partner

REMANUFACTURE AND ENHANCEMENTS

With extensive OEM knowledge on all press manufacturers—and as the exclusive OEM for Verson® and Danly presses—we have the technical expertise and in-house capabilities to remanufacture damaged presses, components, parts, and related support equipment back to a new OEM state.

We pride ourselves on restoring equipment or manufacturing NEW equipment to meet your facilities' high demands, as well as maximize your investment and return.

Our engineering department utilizes in-facility 3D laser scanning, laser tracking, Faro arm 3D scanning, and CMM hardware & software to precisely design to extend equipment lifecycles. And by leveraging FEA analyses and 3D modeling, we can predict stress points and potential equipment failures before they occur.

MODERNIZATION AND EFFICIENCY SOLUTIONS

With our Advanced Engineering team, we're confident we can boost productivity through our engineered modernization solutions—even with the most complex machinery, equipment, and production needs.

For example, by performing a detailed analysis, we can make alterations to the base design to reduce the stress and deflection—increasing the life of the machine.

NEW PRESS DESIGN & MANUFACTURING

We can also specify new press replacements to drive your output to new efficiencies. If you're interested in receiving a quote on a wide range of presses, ask us about our Verson®/LCM Press program.

ON-SITE 24/7 FIELD SERVICE

Whether it's an emergency or a scheduled maintenance, our dedicated Field Service team deploy professional technicians to your facility when you need them—managing your equipment initiatives fully, effectively, and efficiently. Our capabilities include:

- Full install/deinstall services
- Start up and calibration
- Complete press rebuild projects
- On-site component repair
- Press adjustments
- On-site welding and machining
- And more

Plus, thanks to our OEM service partnership with Sumitomo and Rotem, we can provide on-site service repair, remanufacture, and maintenance support for all Sumitomo and Rotem presses.

ON-SITE EQUIPMENT HEALTH ASSESSMENTS

By scheduling an on-site visit with us, we can complete a full Equipment Health Assessment on your presses, workflows, and productivity. Our team expertly inspects your equipment for opportunities to improve production, prevent future maintenance, avoid costly shutdowns, and extend the overall lifecycle of your machinery.

SAFETY

We're committed to continuously improving our measures to promote the environment, health, and safety for our team. All incidents are investigated so we can establish effective and sustainable countermeasures that prevent future occurrences—and maintain an injury-free workplace. In support of our Environmental, Health and Safety Policy, we're committed to the following principles:

- We believe all incidents are preventable
- We maintain a safe work environment because we care about each other
- We expect stop work when exposed to unsafe conditions
- We report all hazardous conditions
- We adhere to our Environmental, Health and Safety Policy

INDUSTRIES WE SERVE

Automotive	Forging	Appliance
Aerospace	Agriculture	Oil & Gas
